BOONE HALL CELEBRATES CERTIFIED SC

BY EVA MOORE

Looking down from a helicopter on Sept. 30, Commissioner Hugh Weathers saw one of the images that's defined his service at the South Carolina Department of Agriculture so far: the Certified SC Grown logo, carved into a massive field of corn.

Rick Benthall, Director of Marketing for Boone Hall, said the corn maze was part of a great kickoff to the fall season.

"Opening weekend attendance was higher than expected, and as a result we are anticipating a great

Boone Hall honored South Carolina farmers and celebrated its 25th anniversary by making Certified South Carolina the theme of its annual corn maze.

"This year's corn maze was a great opportunity to let our non-farm neighbors from here in Charleston and around the state learn a little bit more about South Carolina agriculture, learn about Certified South Carolina Grown," Weathers told Lowcountry TV station WCSC at a ribboncutting ceremony for the maze.

Commissioner Weathers is closely connected to Boone Hall, as its late owner, Willie McRae, was a friend and champion of agriculture in South Carolina.

fall event moving through the month," Benthall said.

Boone Hall worked with a company that specializes in corn mazes to create and refine the maze design, incorporating the Certified SC logo in a way that made for a challenging and fun activity for attendees.

The eight-acre maze is part of Boone Hall's fall festival, which also includes a pumpkin patch, Family Friendly Monster Hayride, the All American Petting Zoo, and more. Boone Hall is located at 1235 Long Point Rd. in Mount Pleasant. The event is open the remaining Fridays and Saturdays in October from 10 a.m. to 6 p.m., and Sundays from noon to 6 p.m. Admission is \$12 per person for ages 2 and up. Children under 2 are admitted free with an accompanying adult. For more information, visit boonehallplantation.com.

SOUTH CAROLINA COMMISSIONER OF AGRICULTURE

COOKING CERTIFIED SC STYLE

Blanche and I spent a recent morning at the State Farmers Market demonstration kitchen filming with my friend Bob Redfern. Bob hosts The Sportsman's Table, a weekly cooking segment on his TV show Bob Redfern's Outdoor Magazine. Well, as you can guess, Blanche did the cooking – I provided quality control to make sure the food tasted good. I also got the opportunity to talk with Bob and his audience about the importance of buying and eating local.

Certified South Carolina has a long-running partnership with Bob. His audience of outdoor enthusiasts is receptive to the work we do to promote farmers and agriculture in South Carolina.

You'll have to wait until the shows air to see what Blanche prepared for Bob's show. You'll also see some recipes and cameos from Certified South Carolina and SCDA partners, including Certified SC branding coordinator Ansley Turnblad, South Carolina Peach Council executive director Ginny Gohagan, and folks from local companies Manchester Quail and Sallie's Greatest.

Bob Redfern's Outdoor Magazine airs on Bally Sports South (formerly Fox Sports South) seven times a week. Check your local listings for exact channels and times. It's also available on WCCB

– ABC TV in Charlotte, North Carolina on Saturday mornings. You can visit Bob's website, bobredfern.com, to view episodes, find recipes and locate more show times.

Looking for more ideas for cooking with Certified South Carolina products? We also have recipes at our Fresh on the Menu website, freshonthemenu.com.

Harvest season is going well so far across the state. While it's still early, we're seeing reports of good yields for corn and peanuts. Cotton farmers have begun defoliation, so we'll be seeing cotton harvesting underway soon around the state. Meanwhile, fall fruits and vegetables are filling the farmers markets – muscadines, turnip and mustard greens, sweet potatoes, and much more.

October and November are also a prime season for agritourism in South Carolina. Pumpkin patches, corn mazes, hay rides – I encourage you to check our event listings in Market Bulletin for just a small taste of some fall events, or visit the SC Agritourism Association website, scfarmfun.com, to search hundreds of member farms.

This is a wonderful time of year to celebrate that we live in South Carolina. We get to enjoy its beautiful outdoor places, bountiful harvests and changing seasons.

Hugh Weathers

UPCOMING EVENTS

Remote Produce Safety Rule Grower Training

October 26 – 27 • 1 – 5:30 pm
Produce growers who must meet the requirements of the FSMA Produce Safety Rule are invited to attend a Produce Safety Rule grower training course. The course is a way to satisfy the following FSMA requirement: “At least one supervisor or responsible party for your farm must have successfully completed food safety training at least equivalent to that received under standardized curriculum recognized as adequate by the Food and Drug Administration.”

Zoom (Online)
Contact: Brooke Horton / South Carolina Department of Agriculture, Produce Safety
803-351-1244 • bhorton@scda.sc.gov

Corn & Costume Event at the L.W. Paul Living History Farm

October 30 • 9 am – 12 pm
Learn all about how corn was grown and used in our farm communities. Visitors can try their hand at shelling corn and learn about the different ways that corn would be cooked in the farmhouse. Bring the kids by to make toys out of corn cobs and corn husks too! We'll be having a costume contest at 11:30, so parents, have your kids dressed like a farmer and be ready to tell us what their favorite crop grown in Horry County is and why!
LW Paul Living History Farm
2279 Harris Short Cut Road, Conway
843-915-5320

The South Carolina
Market Bulletin
(ISSN 0744-3986)

The *Market Bulletin* is published on the first and third Thursday of each month by the SC Department of Agriculture, Wade Hampton Building, Columbia, SC 29201. Periodicals postage paid at Columbia, SC 29201.

Postmaster, send address changes to:
SC Market Bulletin, PO Box 11280, Columbia, SC 29211

POLICIES FOR ADVERTISING

For full policies, visit:
agriculture.sc.gov/market-bulletin/market-bulletin-policies

Only ads pertaining to the production of agricultural products and related items are published. Ads are accepted for South Carolina items, even if the seller lives out of state, provided the item is in state at the time the ad is published and at the time of sale.

Ads are published free of charge and in good faith. The *Market Bulletin* reserves the right to edit and verify ads but assumes no responsibility for their content.

Ads cannot be accepted from agents, dealers, or commercial businesses, including real estate. Sealed bids, legal notices, or consignment sales are not accepted.

SUBMITTING ADS

No matter the submission method, you must include the advertiser's name, complete address with zip code and county, and phone number with area code with your submission. Do not use all capital letters.

- **Email:** Send ads to marketbulletin@scda.sc.gov. Put the words “Market Bulletin ad” in the subject line.
- **Online:** Go to agriculture.sc.gov/market-bulletin. Select “Submit Market Bulletin Ad” and complete the form. If you include your email address, you will receive an automated reminder for a renewal.
- **Mail:** SC Market Bulletin, PO Box 11280, Columbia, SC 29211. You must use 8.5 × 11 inch paper.
- **Fax:** 803-734-0659

The deadline for submitting ads and notices is noon on Tuesday of the week **before** the publication date.

BEWARE OF AD
SALES SCAMS

Often suspicious buyers are located
in another state or country and refuse
to meet in person, and may offer to
pay with an easily falsifiable payment
method like a money order.

Here are some ways to protect
yourself:

• BUY AND SELL IN PERSON

• VERIFY THE PAYMENT

• DON'T GIVE OUT PERSONAL
INFORMATION

• TRUST YOUR GUT

SIGN UP TO BE COUNTED IN THE 2022 CENSUS OF AGRICULTURE

The Census of Agriculture is a complete count of U.S. farms and ranches and the people who operate them. Even small plots of land — whether rural or urban — growing fruit, vegetables or some food animals count if \$1,000 or more of such products were raised and sold, or normally would have been sold, during the Census year. The Census of Agriculture, taken only once every five years, looks at land use and ownership, operator characteristics, production practices, income, and expenditures.

For America’s farmers and ranchers, the Census of Agriculture is their voice, their future, and their opportunity.

If you did not receive the 2017 Census of Agriculture questionnaire and should have, or if you are operating a new farm or ranch, please sign up to be counted in the 2022 Census of Agriculture: Visit nass.usda.gov/AgCensus now.

NEW CLEMSON APP HELPS GRAIN FARMERS MANAGE GRAIN MOISTURE CONTENT

BY DENISE ATTAWAY, CLEMSON UNIVERSITY

Corn harvest is underway and soybean harvest will soon begin in South Carolina. To help farmers when making decisions related to storing or field drying grain crops, Clemson University has a new app.

The app is the Clemson EMC Calculator, developed by Clemson’s Department of Agricultural Sciences and Precision Agriculture group to help farmers optimize moisture content of stored grain and help evaluate field drying grain.

Equilibrium Moisture Content (EMC) is the moisture content grain will attain if exposed to a specific relative humidity and temperature for a long enough duration. Given enough time, grain moisture will come to match the temperature and relative humidity in the air around it. EMC calculations are used to determine best drying conditions.

“Knowing the EMC is useful for estimating the moisture content of grain in storage, determining the lowest moisture content that can be achieved for given conditions and analyzing drying processes,” said lead developer Aaron Turner, assistant professor in the Clemson agricultural mechanization and business program.

EMC also can be used as an indicator of how grain moisture will change. If EMC is lower than grain moisture content, drying will occur. If EMC is higher than the current moisture, rewetting occurs, although much slower than drying.

The Clemson EMC Calculator can predict how EMC will change using the 5-day weather forecast from OpenWeatherMap.org. This is useful when making decisions involving natural air drying, where fans and air are used to condition the grain.

“The goal is to cool and dry the grain to reach safe storage conditions and to preserve quality,” Turner said. “When using natural air drying, heat and moisture are transferred from the grain to the air being blown through the bin.”

Traditionally, farmers have been advised to continuously run fans until the drying front moves all the way through the grain. But recent research has shown intermittent fan operation works in some situations.

“This can prevent warming the grain, rewetting and can help save electricity,” Turner said. “This tool can help identify periods when the air would be productive to either cool or dry the grain, which would be useful for someone who is interested in manual fan scheduling.

“The initial motivation behind this was to reduce fan runtime while still maintaining manual control of when the fans cycle on and off.”

There are some rules of thumb for when to run the fans and even some automated systems that automatically control the fans. Generally, mold growth is suppressed when grain moisture is low enough so the relative humidity in the grain pore spaces is less than 65% and insect activity is greatly reduced when the temperature is less than 40 degrees.

Drying time depends on moisture content, ambient conditions, and airflow. Turner suggests checking with equipment dealers to ensure the fans provide enough airflow for the bin (about 2 cubic feet of air per minute/ bushel, or 2 cfm/bu). Additionally, coring and leveling a bin before drying improves drying uniformity. Once the grain is dry, check the grain condition frequently and use good aeration practices to help reduce moisture migration. A final suggestion is to use temperature and/or moisture cables to monitor the drying process and conditions in storage.

In addition to being used after harvest, this calculator also can be used by farmers who are field drying. The same weather forecast can give an indication of the drying potential and how grain moisture will change in the field.

“Generally, the bigger the difference between the current moisture and EMC, the more drying potential there is,” Turner said. “The assumption is that during an extended field drying period, grain moisture will fluctuate with EMC.”

This free app can be found at precisionag.sites.clemson.edu/Calculators/Grain_Storage/EMC_Calc/.

To calculate EMC for a single set of conditions, just four inputs are required — temperature, relative humidity, crop and model. The calculator utilizes standardized relationships provided by American Society of Agricultural and Biological Engineers to estimate EMC.

Several models have been proposed to represent this relationship, and the calculator allows users to select between them and see changes in the results. Farmers who don’t have a preference as to which model they use should use the composite option, which is the default.

“The composite option takes the average of all the models,” Turner said.

The calculator also can help with ambient air EMC forecasting. Inputs required are Zip code, crop and model. Again, farmers who don’t have a model preference should use the composite option.

Kendall Kirk, a Clemson precision agriculture engineer housed at the Edisto Research and Education Center in Blackville, South Carolina, said he was “marginally involved,” adding Turner and doctoral student Brennan Teddy from Shelby, North Carolina, did most of the work.

“There are other EMC calculators out there, but what sets Aaron’s apart is the forecasting capability, which can really help with on-farm management decisions and planning,” said Kirk, adding the app distinguishes itself from many others as being simple to use and intuitive.

The EMC Calculator is one of several free, web-based apps from Clemson Precision Agriculture. These apps are accessible from just about any device with a web browser and can be found at clemson.edu/extension/agronomy/PrecisionAgriculture/calculators/. For more information, contact Aaron Turner at apturne@clemson.edu.

SC GOVERNOR’S SCHOOL FOR AGRICULTURE ACCEPTING ADMISSIONS APPLICATIONS FOR THE 2022–2023 SCHOOL YEAR

MCCORMICK, SC – The SC Governor’s School for Agriculture at John de la Howe (JDLH) is a public, residential high school for students interested in developing their skills and education in agriculture. The SC Governor’s School for Agriculture is currently accepting applications for the 2022–2023 school year. Students in grades 10–12 from South Carolina and surrounding states are eligible to apply.

Located on 1,310 acres in McCormick, SC, the SC Governor’s School for Agriculture is now the only residential high school for agricultural education in the nation. As such, it provides extraordinary opportunities for young South Carolinians to enter their state’s largest industry, agriculture. There is no tuition, and residential living is free.

The only fee is for the meal plan. JDLH provides a challenging academic program that enhances students’ knowledge and experience in the field of agriculture and meets the requirements for a high school diploma in South Carolina. The curriculum begins with four Agricultural Pathways: Environmental & Natural Resources Management, Horticulture, Plant and Animal Systems, and Agricultural Mechanics & Technology. The academic core courses offered at JDLH are all taught on the honors level and presented through a lens that shows how they relate to agriculture. Dual Enrollment is offered, meaning students can take courses for college credit, and can also obtain certifications in such critical agricultural skills as artificial insemination and drone technology.

The final application deadline is January 4, 2022. Applicants can apply as a residential or day student. Residential students will live in on-campus housing and will have the opportunity to fully immerse themselves in the campus atmosphere, farm life, and their studies. Day students will attend school during the week and return to their homes at the end of each school day, still having the opportunity to participate in all school activities, farm responsibilities, and weekend events.

For more information and to apply online, visit delahowe.sc.gov/admissions. Interested individuals can book a one-on-one tour online or attend a virtual information session. To stay up to date with the SC Governor’s School for Agriculture at John de la Howe, follow on Facebook, Instagram, and Twitter.

WANTED: LOCAL STAKEHOLDERS TO GUIDE WATER PLANNING IN SOUTH CAROLINA’S BROAD RIVER BASIN

BY SCDNR

The S.C. Department of Natural Resources (SCDNR) has announced dates for two public meetings to provide citizens with an overview of a new water planning framework that will guide surface water management in the Broad River Basin over the next 50 years.

The meetings will also serve as venues for engaging volunteers interested in serving on a council that will develop and implement the plan for the Broad River Basin. Meetings are scheduled at the Cooperative Conference Center in the City of Columbia on Monday, November 8th and at the 1881 Event Hall in the City of Spartanburg on Tuesday, November 9th (directions below). Both meetings will be held from 6 p.m. until 8 p.m.

In March 2018, SCDNR established the State Water Planning Process Advisory Committee (PPAC) to help draft a “framework” document that will guide the development of individual River Basin Plans for each of the state’s eight major river basins. The PPAC includes representatives from a wide range of organizations, including the S.C. Department of Health and Environmental Control (SCDHEC), Clemson University’s S.C. Water Resources Center, municipal and rural water systems, conservation groups, power companies and agricultural interests. In 2019, the group completed a report, the “South Carolina State Water Planning Framework,” which describes the river basin planning process and the intended contents of a River Basin Plan.

“The Planning Framework represents a foundation for the development of regional and state water plans, which are essential for our continued economic growth and protection of the resources and environment that we all share,” said Ken Rentiers, Deputy Director for SCDNR’s Land, Water & Conservation Division.

Each River Basin Plan will be created and overseen by a River Basin Council, a working group of stakeholders with water interests in the basin. The Edisto River Basin was selected as the first basin to implement the new planning framework. The Edisto River Basin Council was established in June 2020, and planning activities in the basin are ongoing. The Broad River Basin has been selected as the next basin to implement the new planning

framework, with the Pee Dee River Basin scheduled to begin in early 2022. Planning efforts and councils in the other five basins will follow as funding becomes available.

At its most fundamental level, a river basin plan will address four basic questions:

- What is the basin’s current available water supply and demand?
- What are the current permitted and registered water uses within the basin?
- What will be the water demand in the basin

throughout the Planning Horizon and will the available water supply be adequate to meet that demand?

- What water management strategies will be employed in the basin to ensure the available supply meets or exceeds future projected demand?

As stated in the Planning Framework, “Answering the fourth question is the heart of the water-planning process and greatly benefits from cooperation and consensus among all stakeholders throughout the basin. A successful and equitable River Basin Plan addresses the effects all water users have on one another and on the resource.”

Public involvement is critical to the goal of ensuring that future generations of South Carolinians have secure, well-managed supplies of our most critical natural resource — water. You can download a copy of the “South Carolina State Water Planning Framework” and learn more about the PPAC and the research underpinning this initiative at: hydrology.dnr.sc.gov/state-and-river-basin-planning.html.

MEETING LOCATIONS & TIMES

COLUMBIA – NOVEMBER 8, 2021
6 p.m. – 8 p.m.
Cooperative Conference Center
169 Laurelhurst Ave
Columbia, SC 29210

SPARTANBURG – NOVEMBER 9, 2021
6 p.m. – 8 p.m.
1881 Event Hall
805 Spartan Boulevard
Spartanburg, SC 29301

STATE FARMERS MARKETS HOST FALL FESTIVALS

BY SAMANTHA DAY

The annual Fall Plant and Flower Festival, like mostly everything else, took a break last year due to the COVID-19 pandemic. But this year saw the return of the annual spring and fall festivals at all three state farmers markets—Pee Dee, Greenville, and the Midlands. This year the Pee Dee State Farmers Market’s fall market had over 16,700 visitors, which is 36% more than 2019. The Midlands market greeted around 18,850 visitors during their three-day event.

Since 2009, market goers have looked forward to the plant and flower festivals. Attending them has been a tradition for many, especially since they help ring in the bountiful spring and fall seasons. A variety of home, yard, and garden décor are up for display and purchase along with crafts, traditional fall plants, in-season Certified SC Grown produce.

Each market is so grateful for their dedicated visitors and loyal vendors. They appreciate your continued support in helping your local farmers markets and vendors thrive! Mark your calendars for the 2022 spring festivals:

SC STATE FARMERS MARKET
April 7 – 10

PEE DEE STATE FARMERS MARKET
April 21 – 24

GREENVILLE STATE FARMERS MARKET
April 28 – May 1
